1. Creating Database:

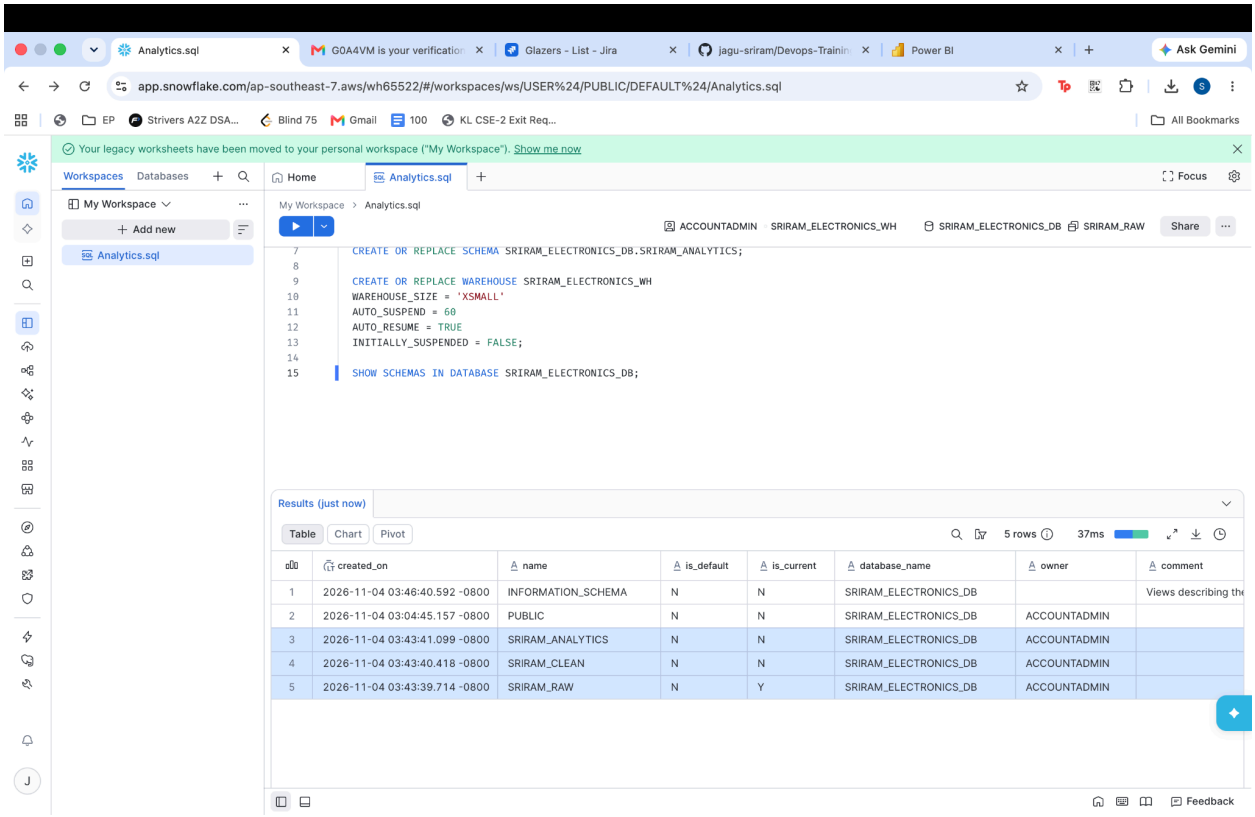

2. Creating schemas:

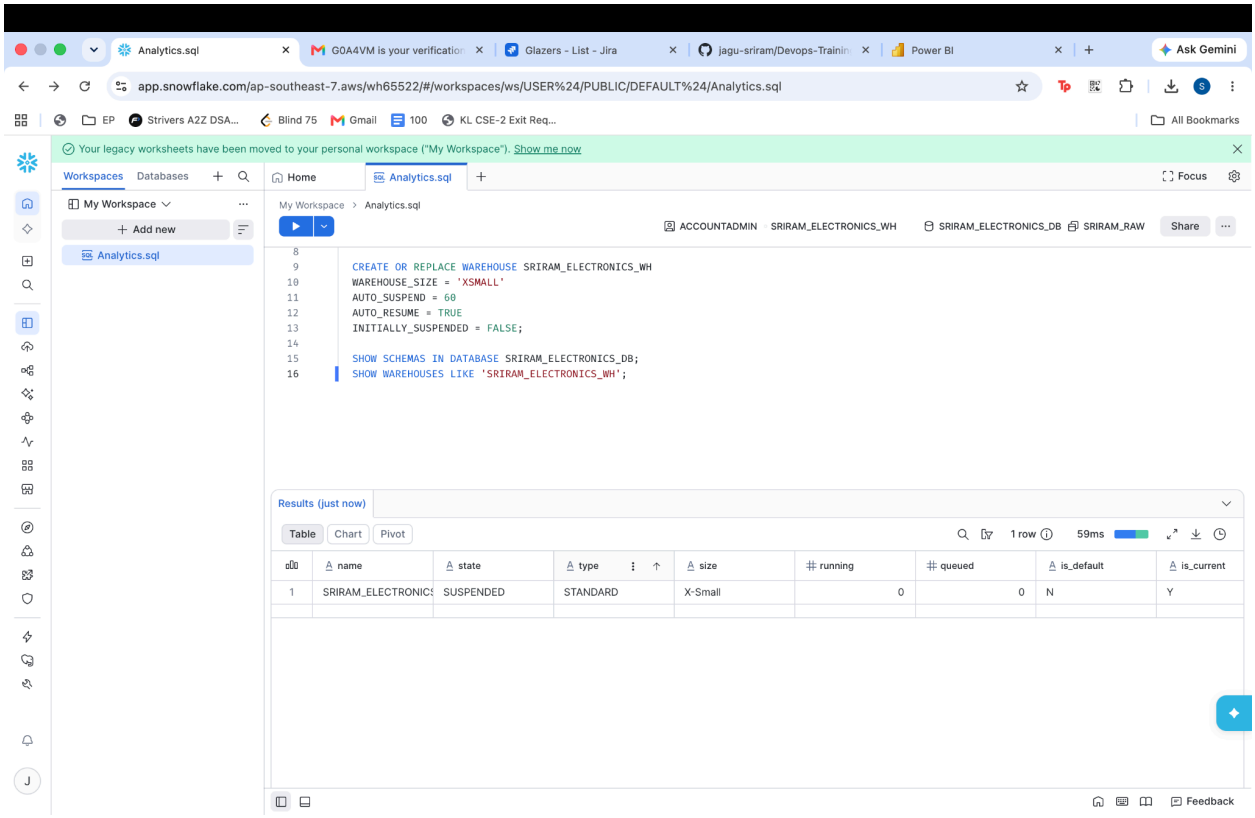

3. Creating warehouse:

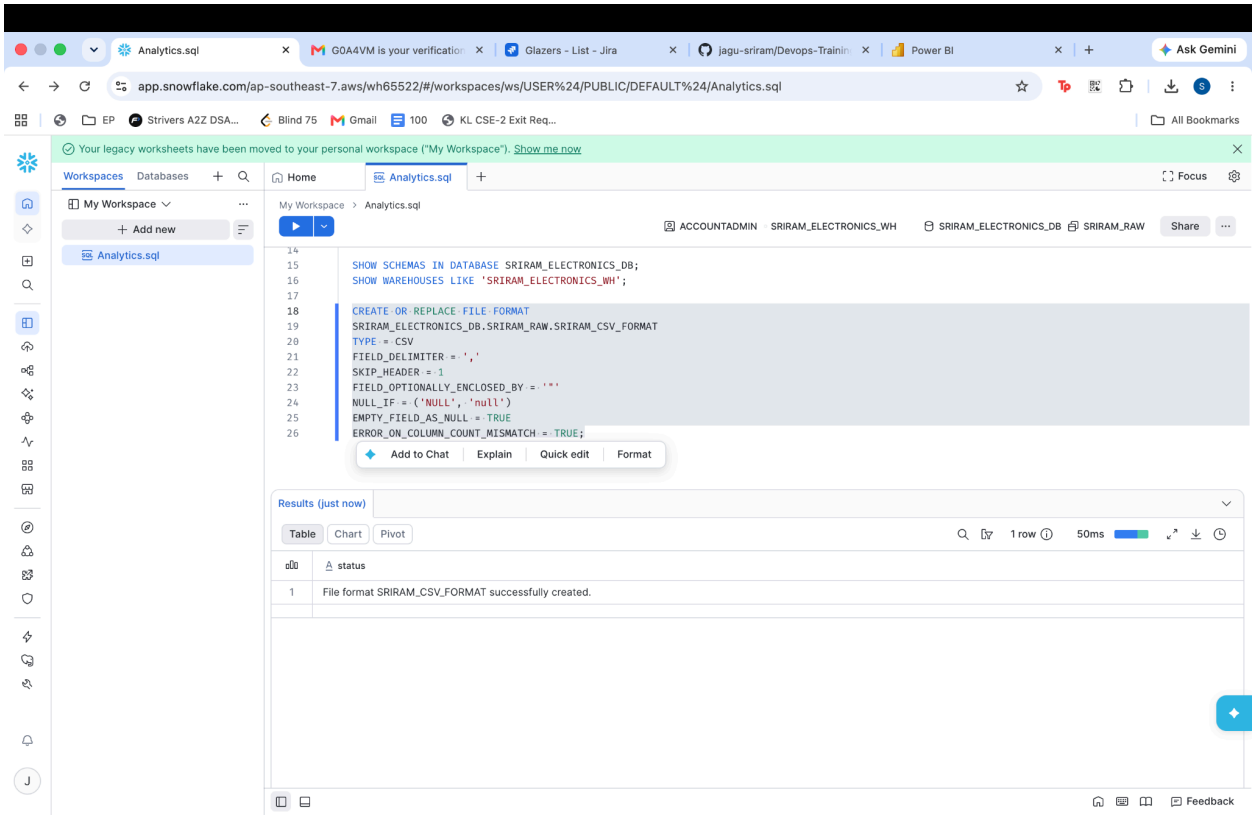

4. Verifying schemas creation:

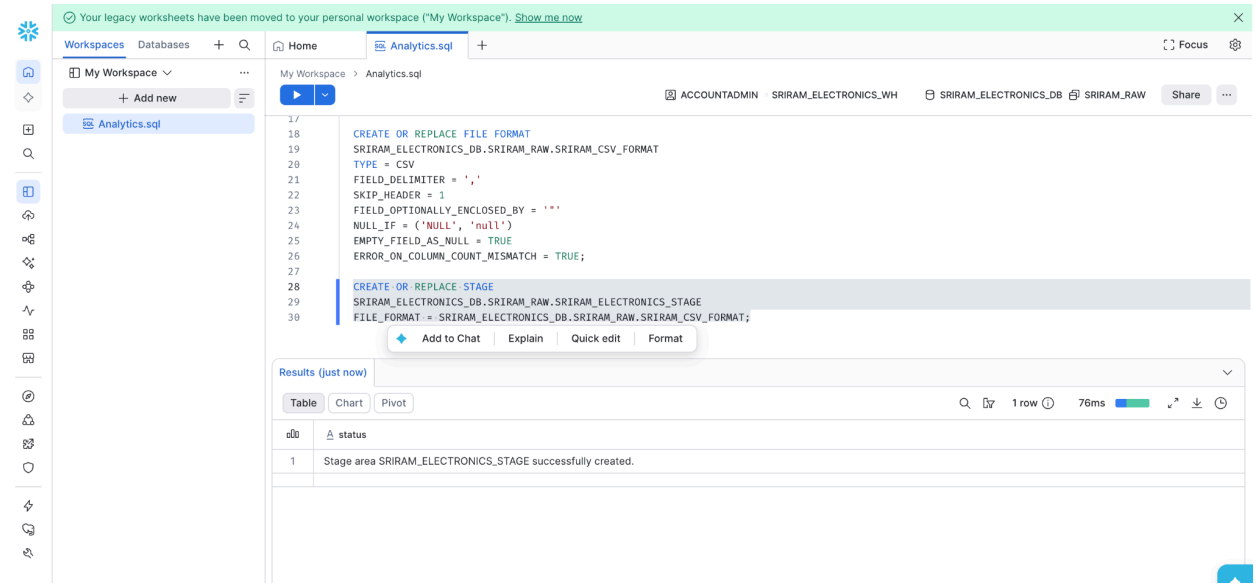

5. Verifying warehouse creation and status: (SUSPENDED)

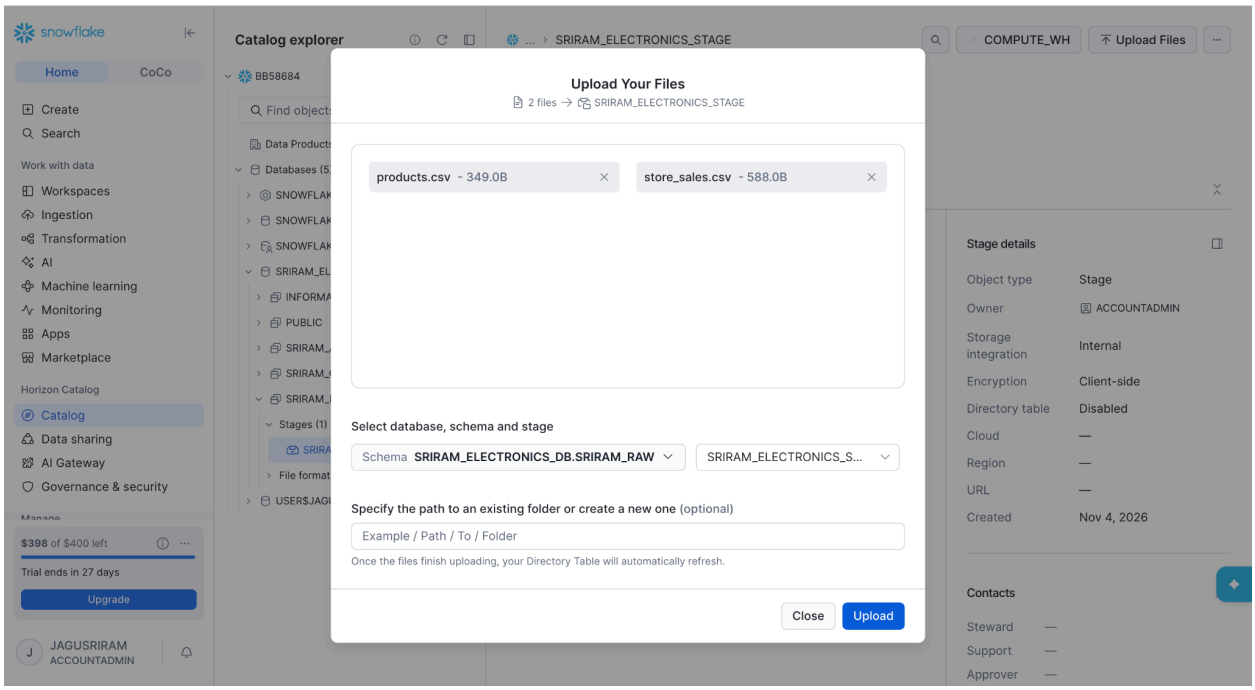

6. Creating a file format:

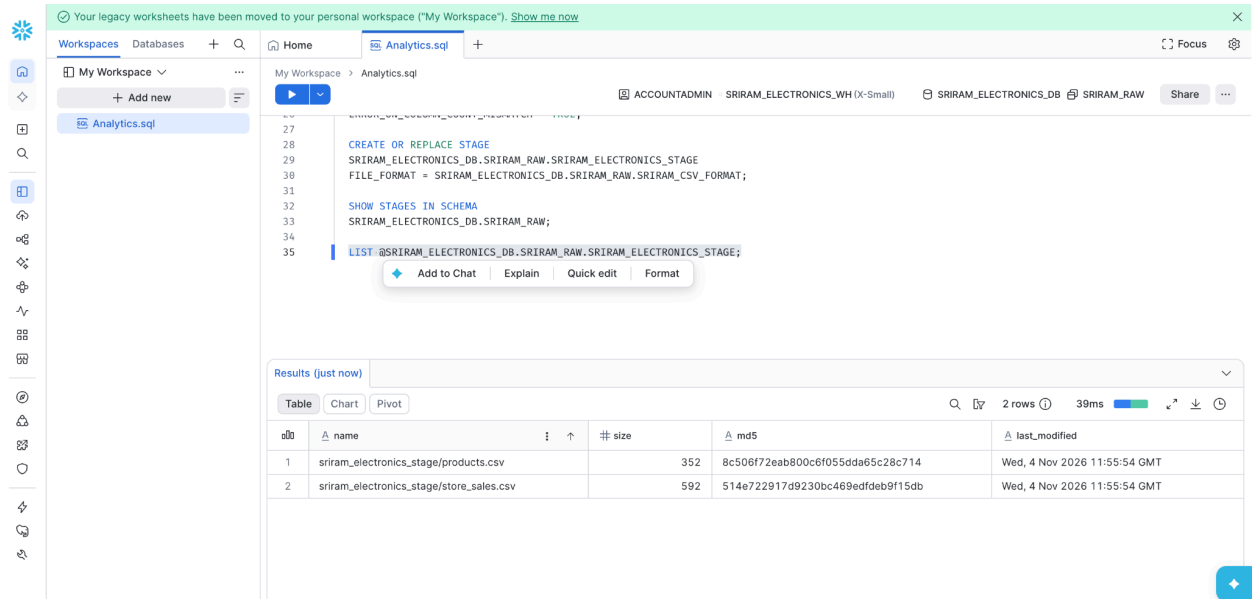

7. Creating internal stage:

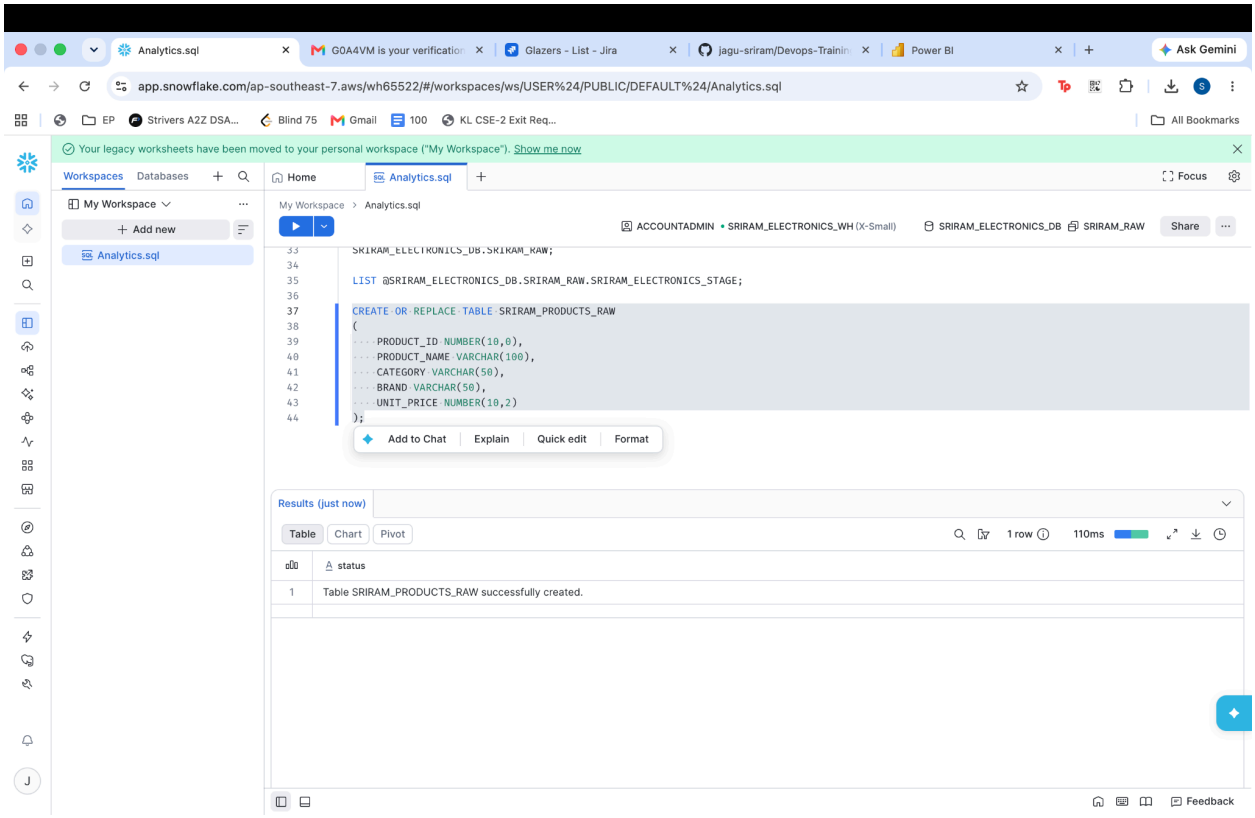

8. Uploading data csv files to stage:

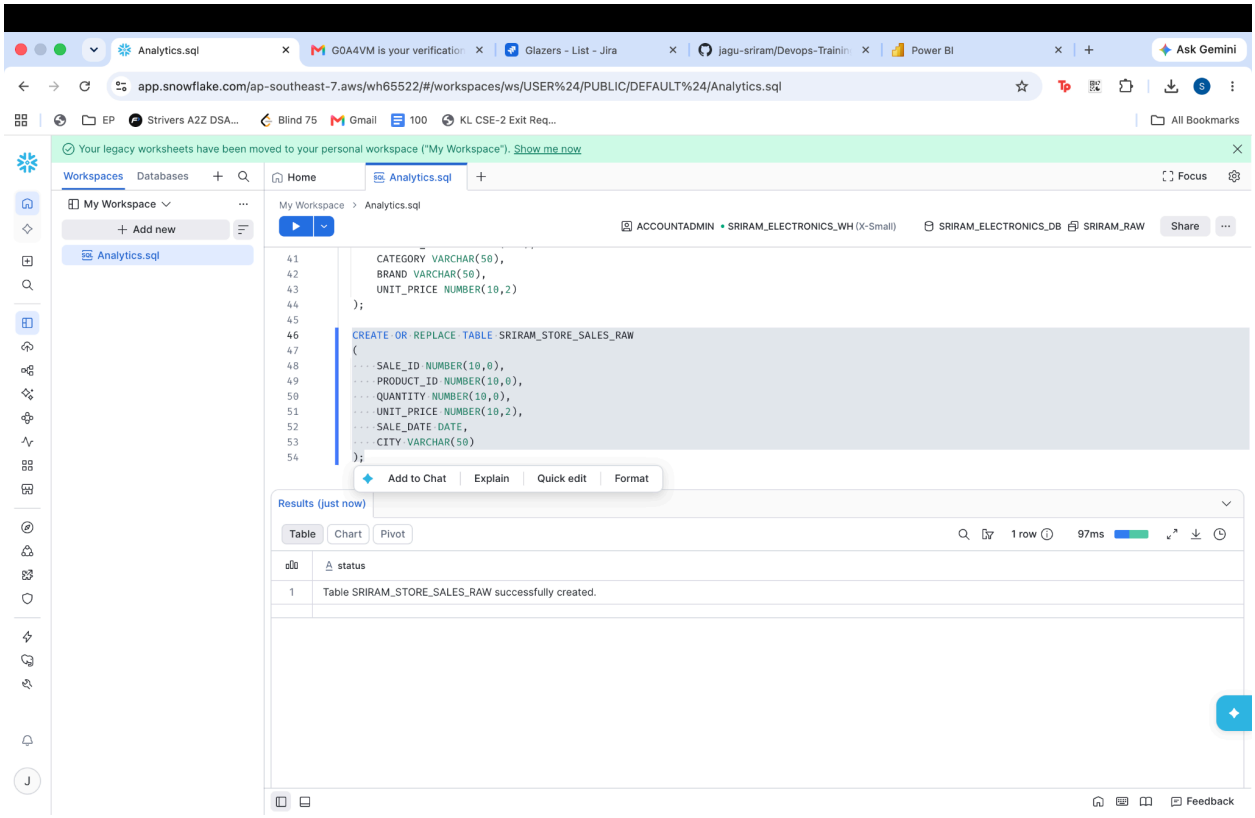

9. Verifying files uploaded into stage:

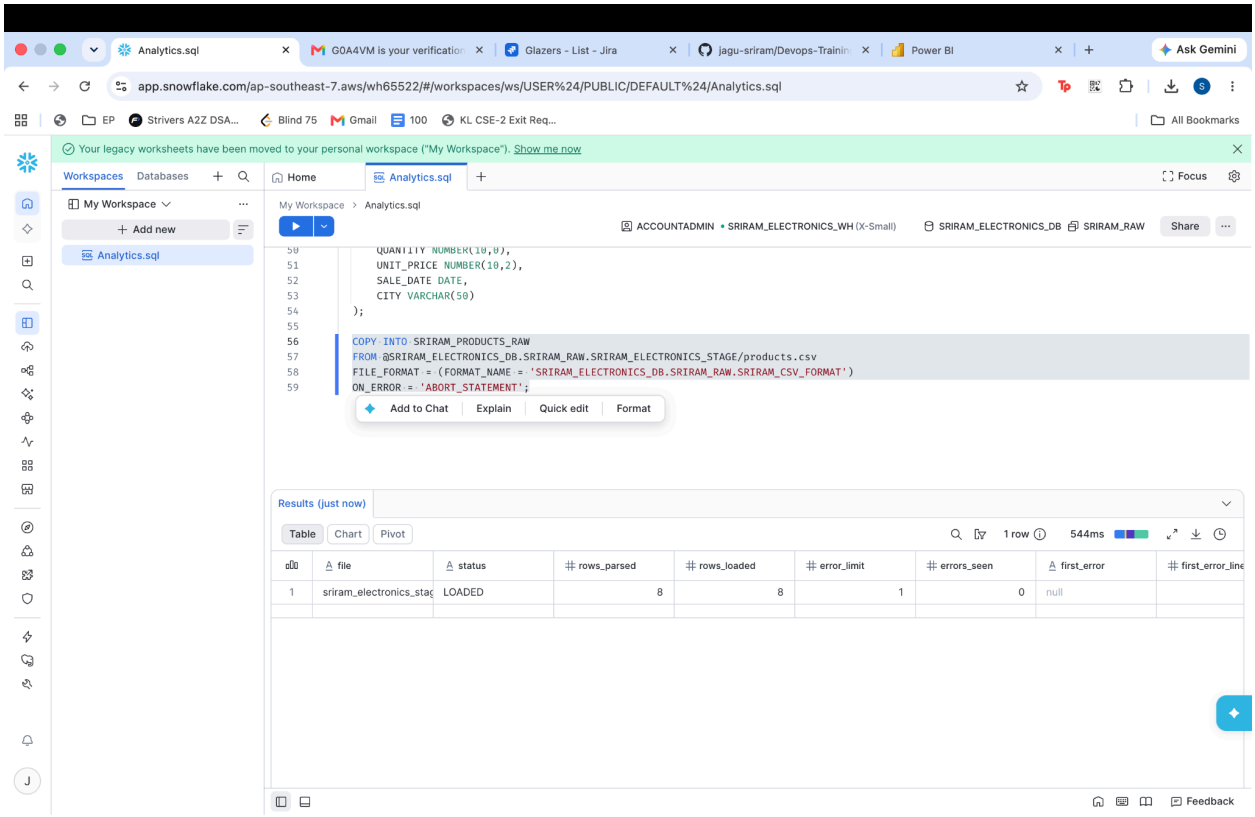

10. Creation of Product table:

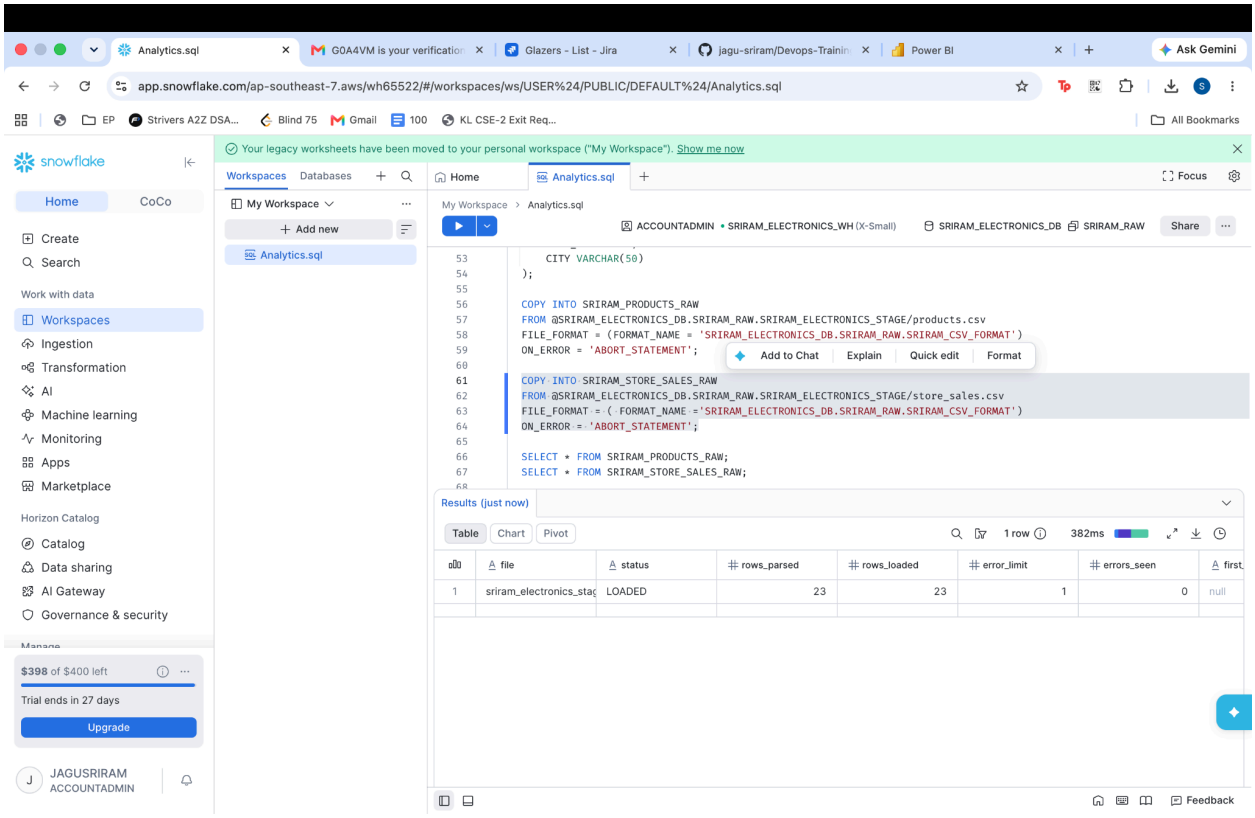

11. Creation of Store_sales table:

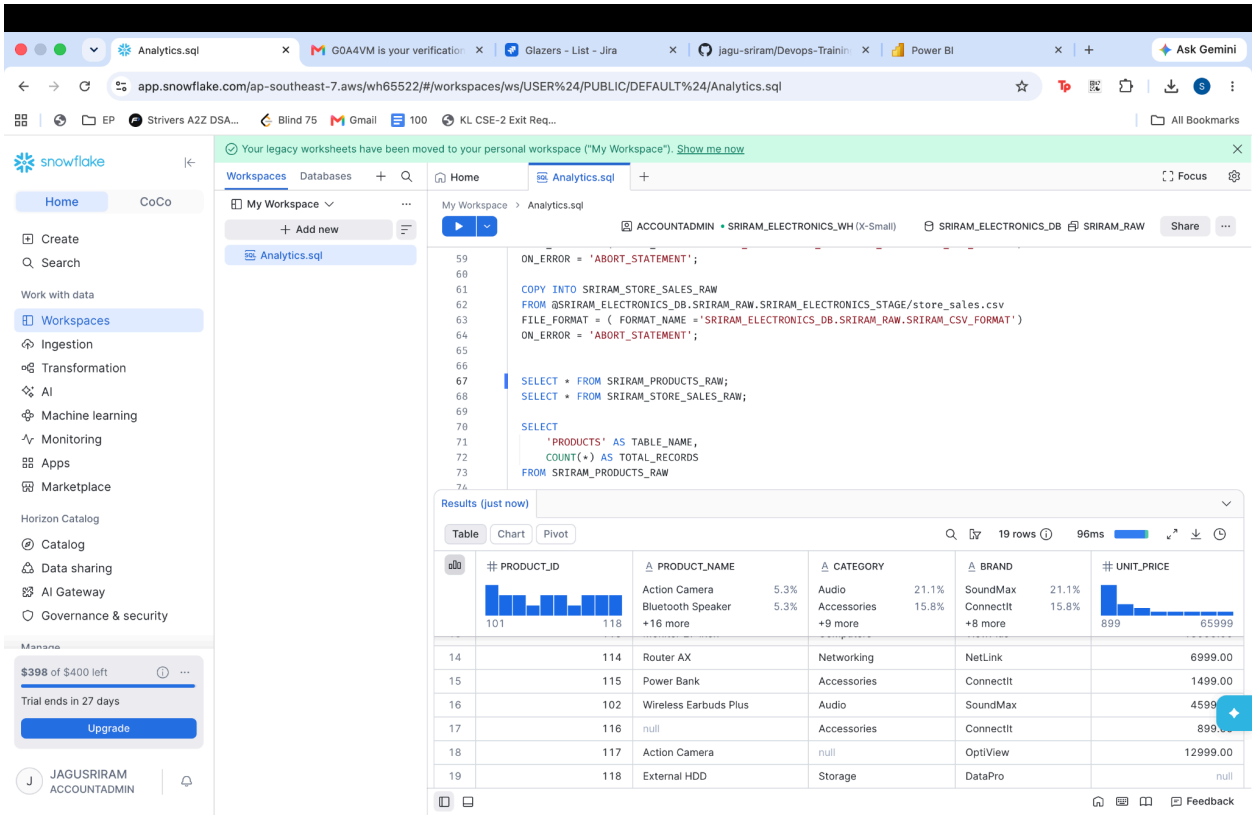

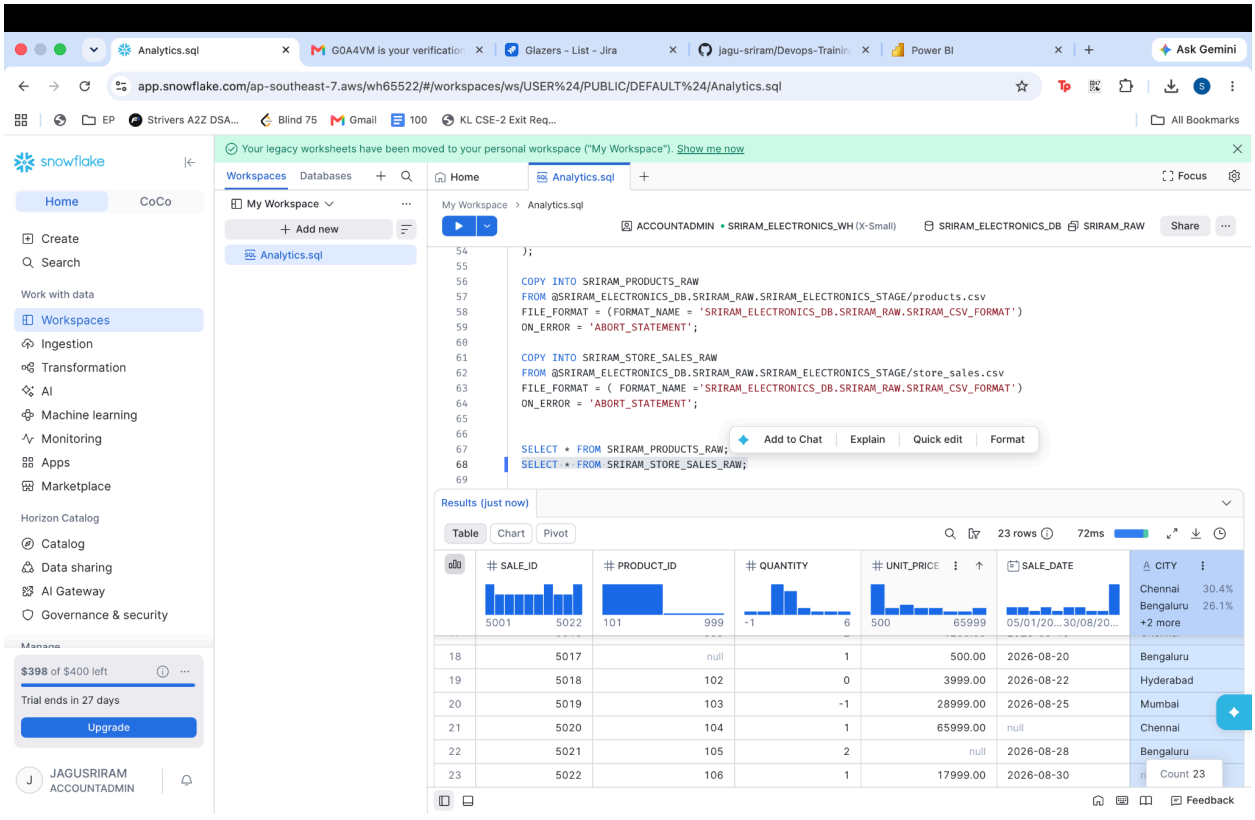

12. Loaded product csv and sales csv data from stage to table using COPY INTO command:

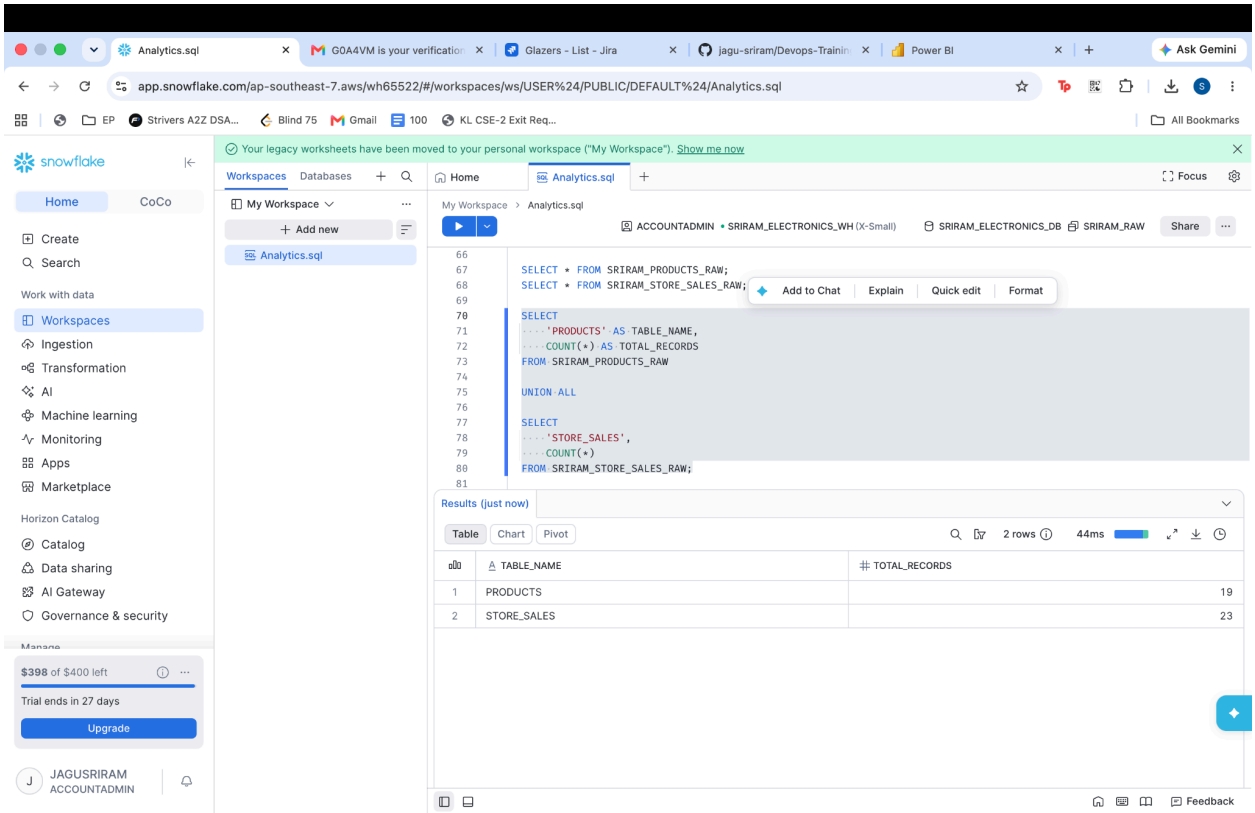

13. Querying product and sales tables:

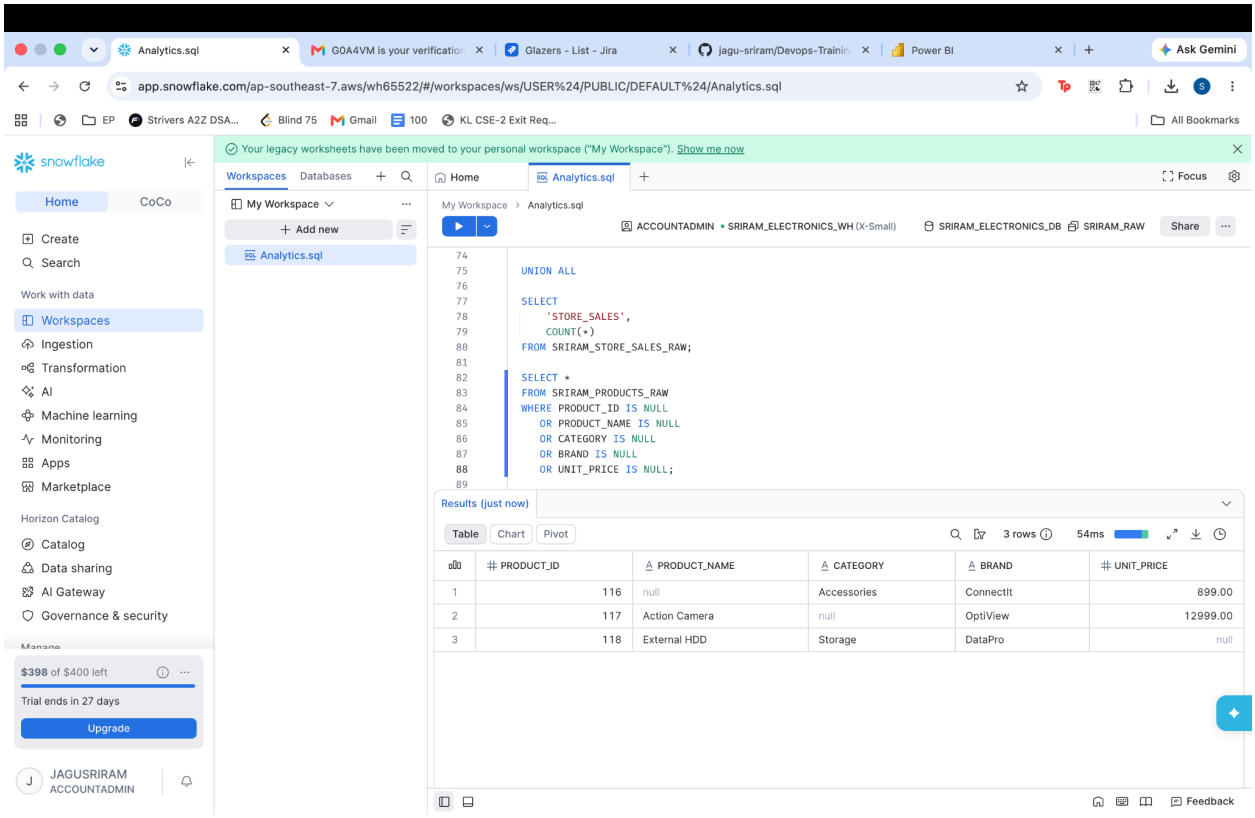

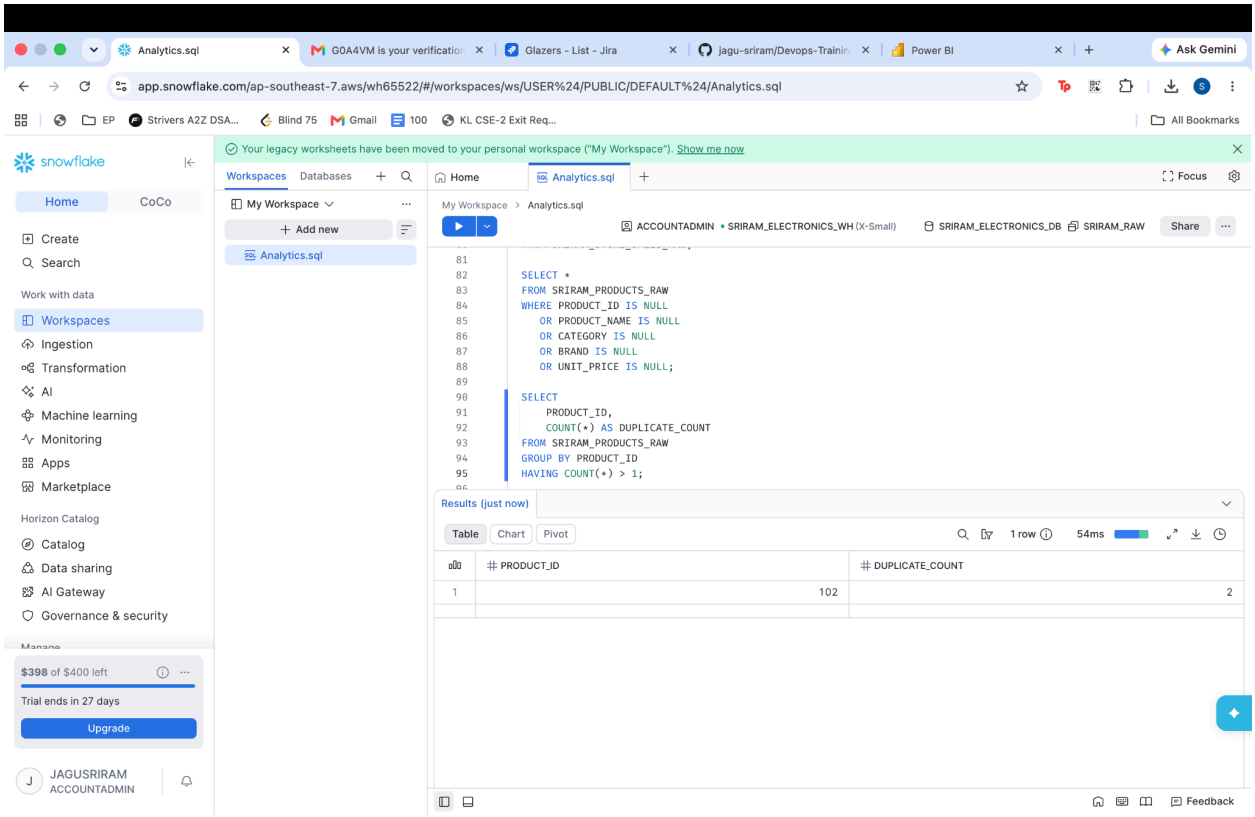

14. Checking total records in each table:

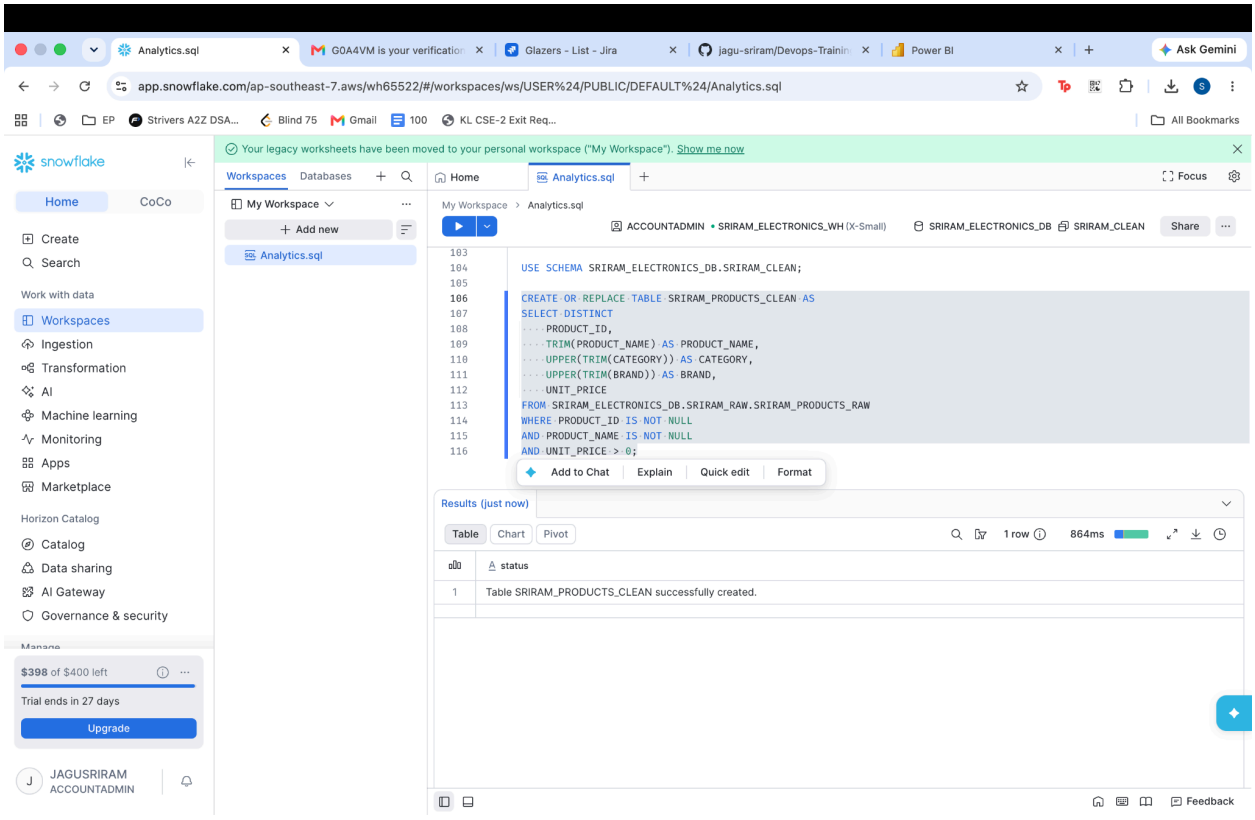

15. Finding out records with null values: (no null values present)

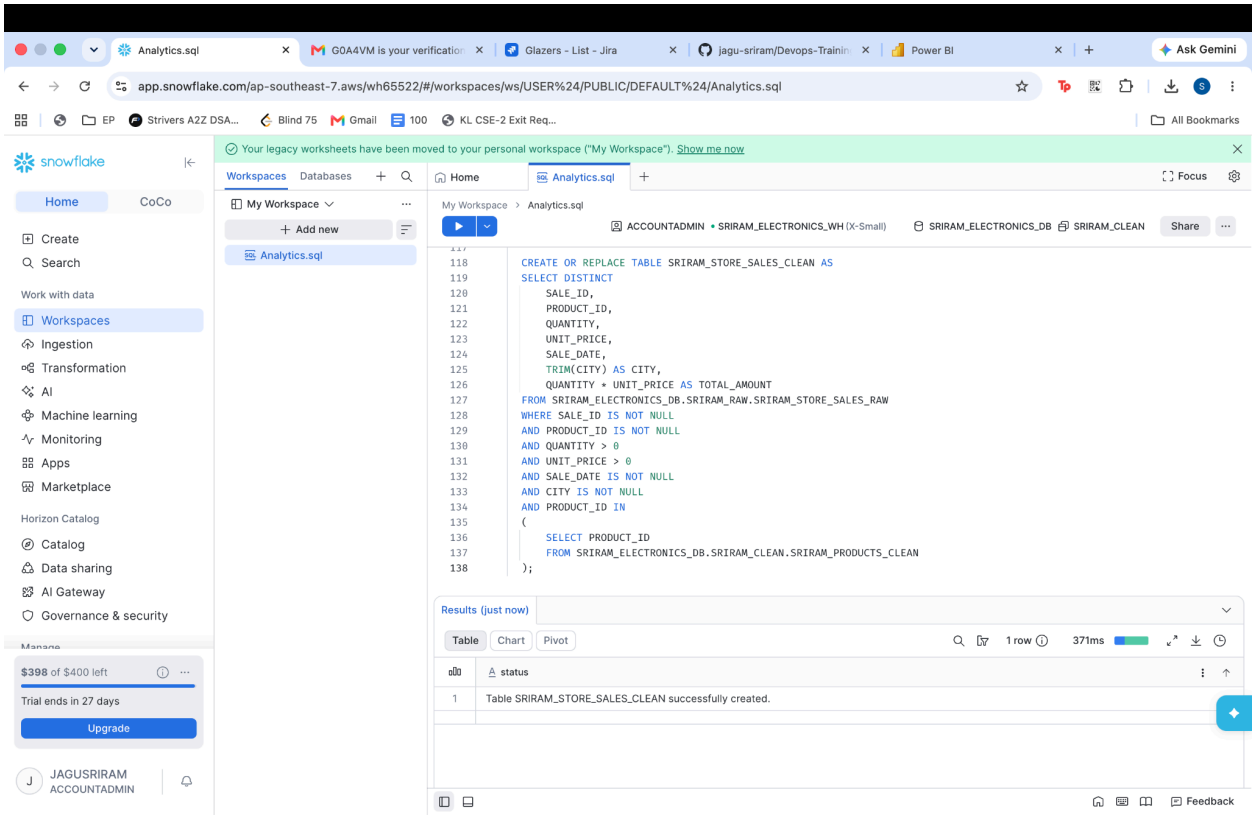

16. Counting duplicate values:

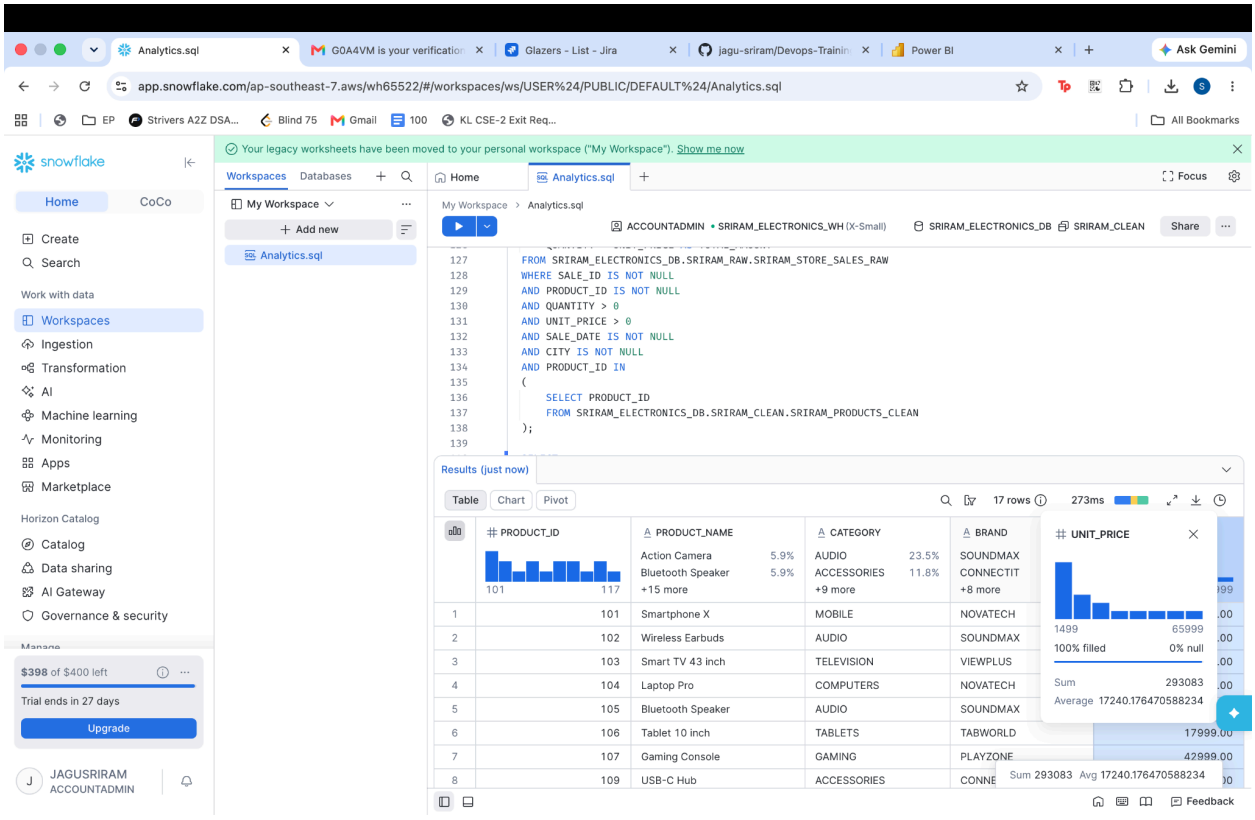

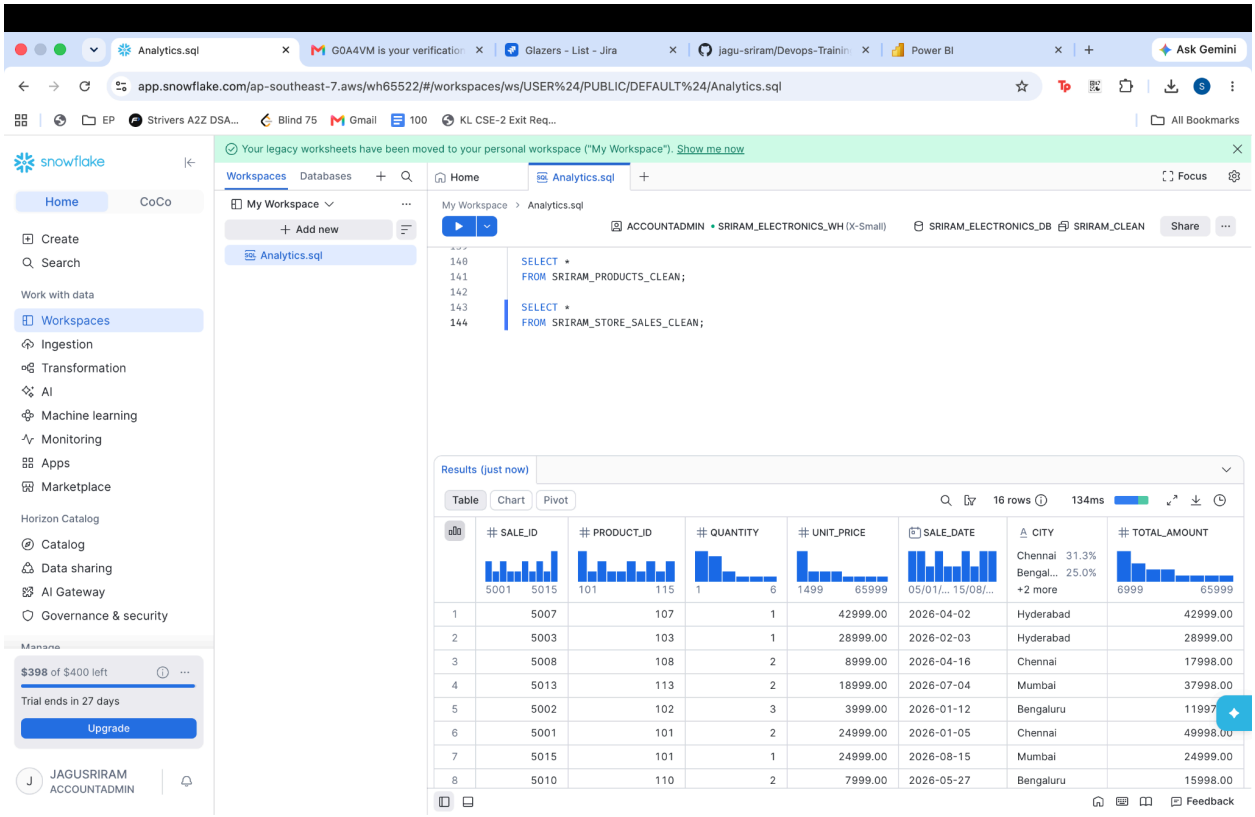

17. Creating a clean products and sales table in another schema (CLEAN schema):

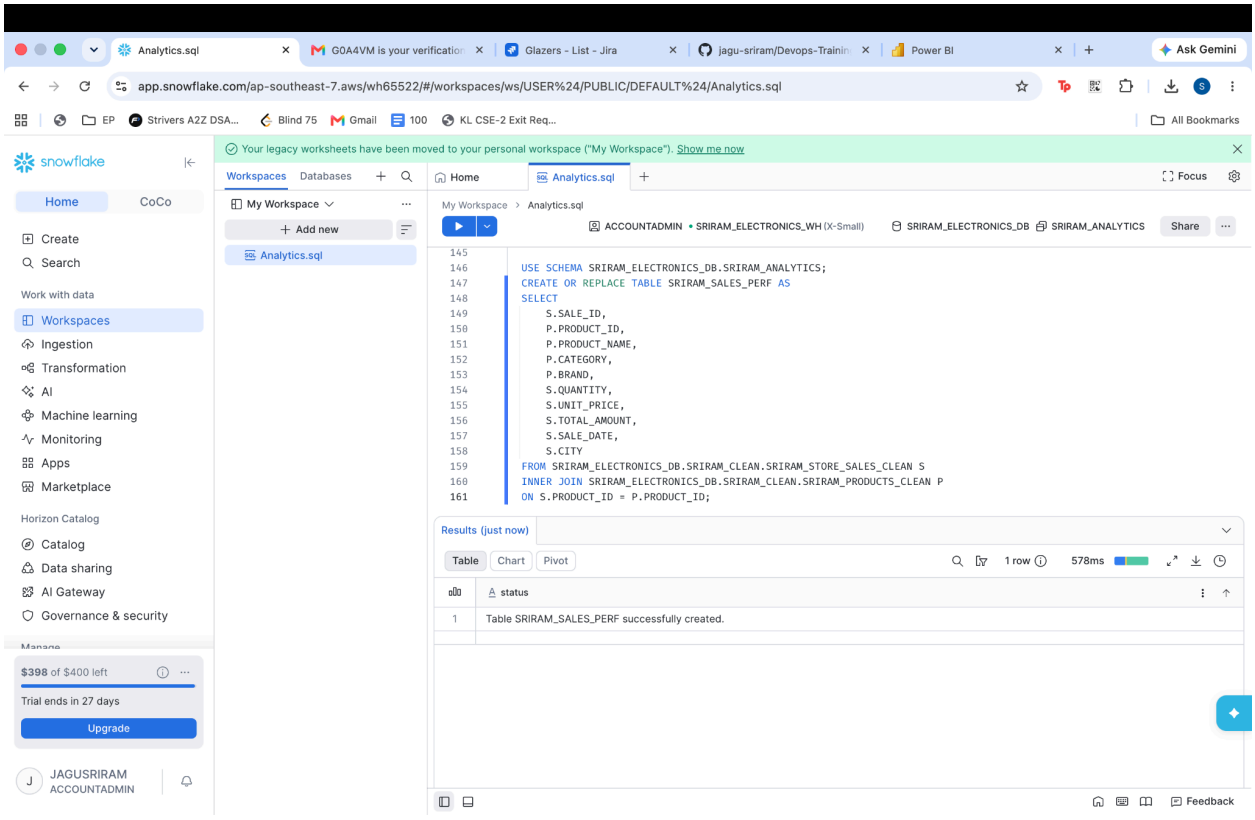

18. Verifying cleaned tables:

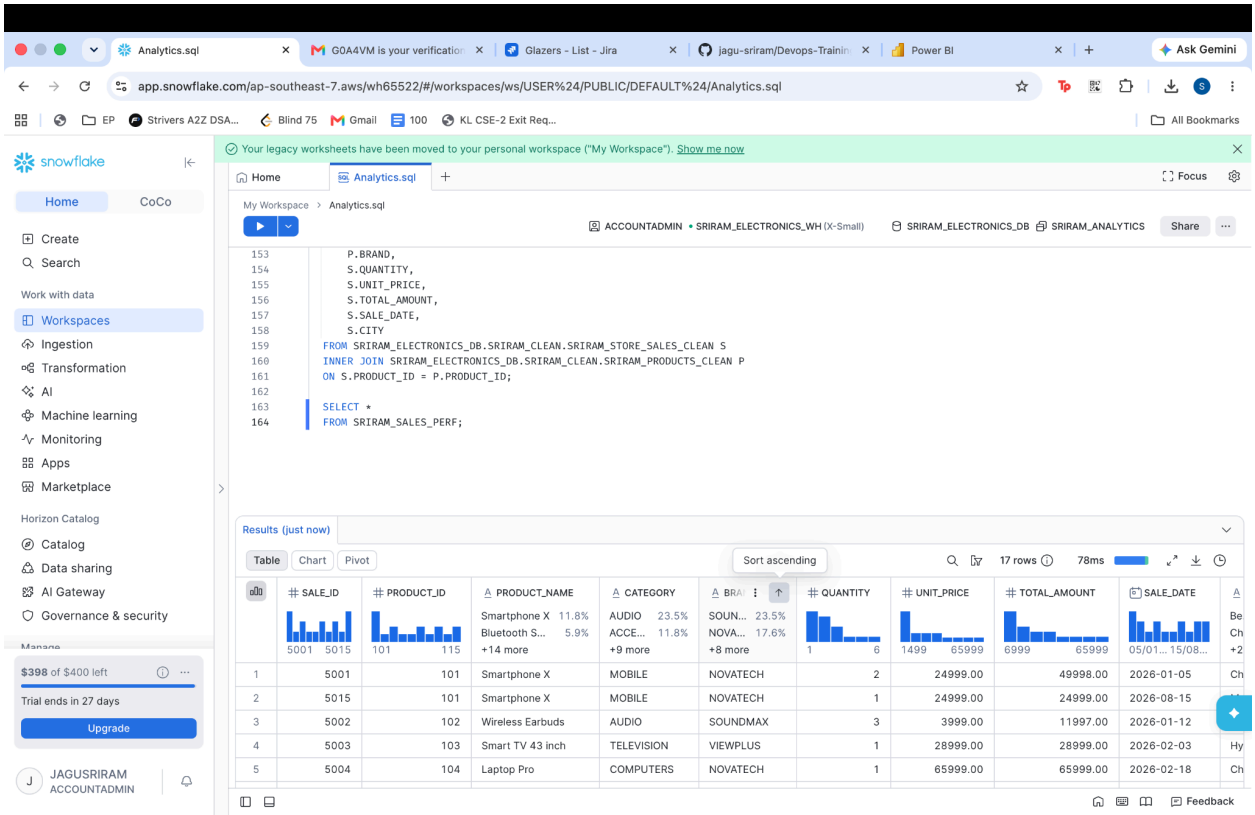

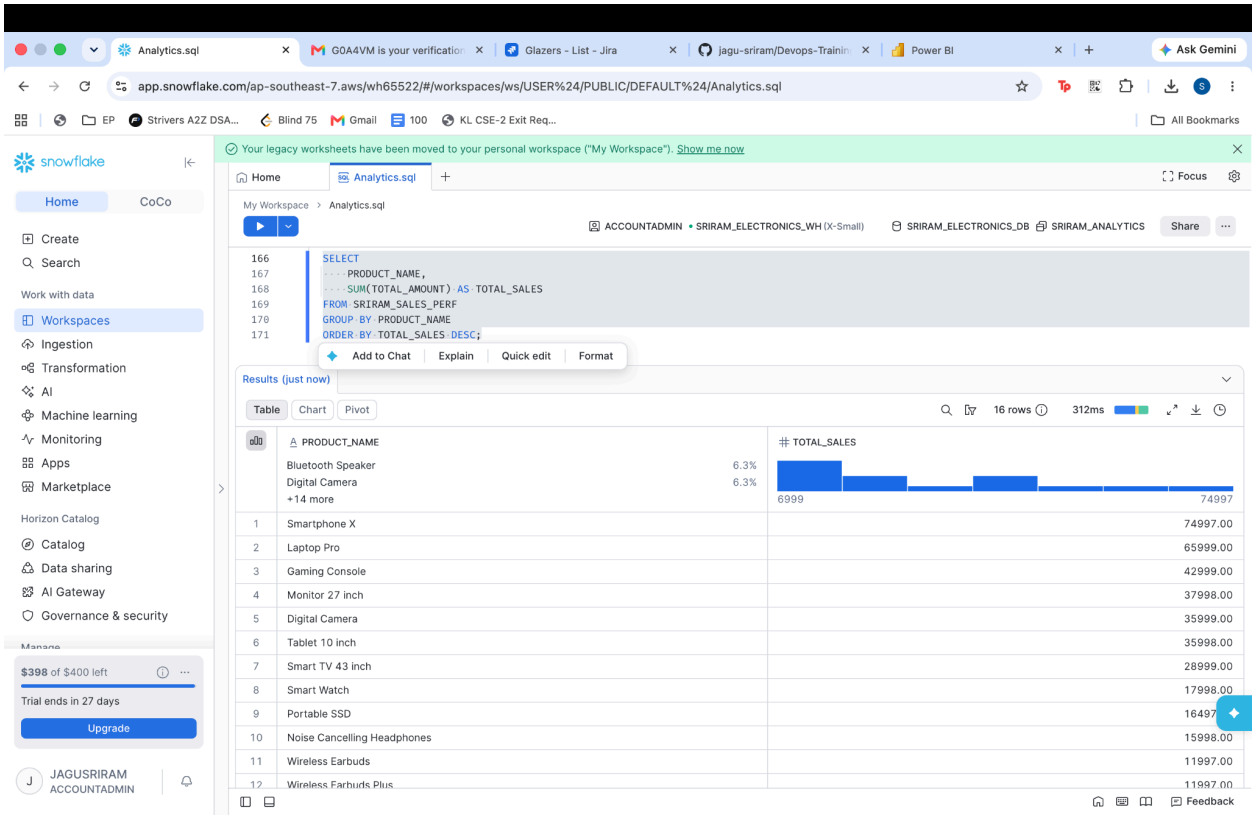

Verified that data is clean.

19. Creating a join table(products and sales clean data) in analytics schema:

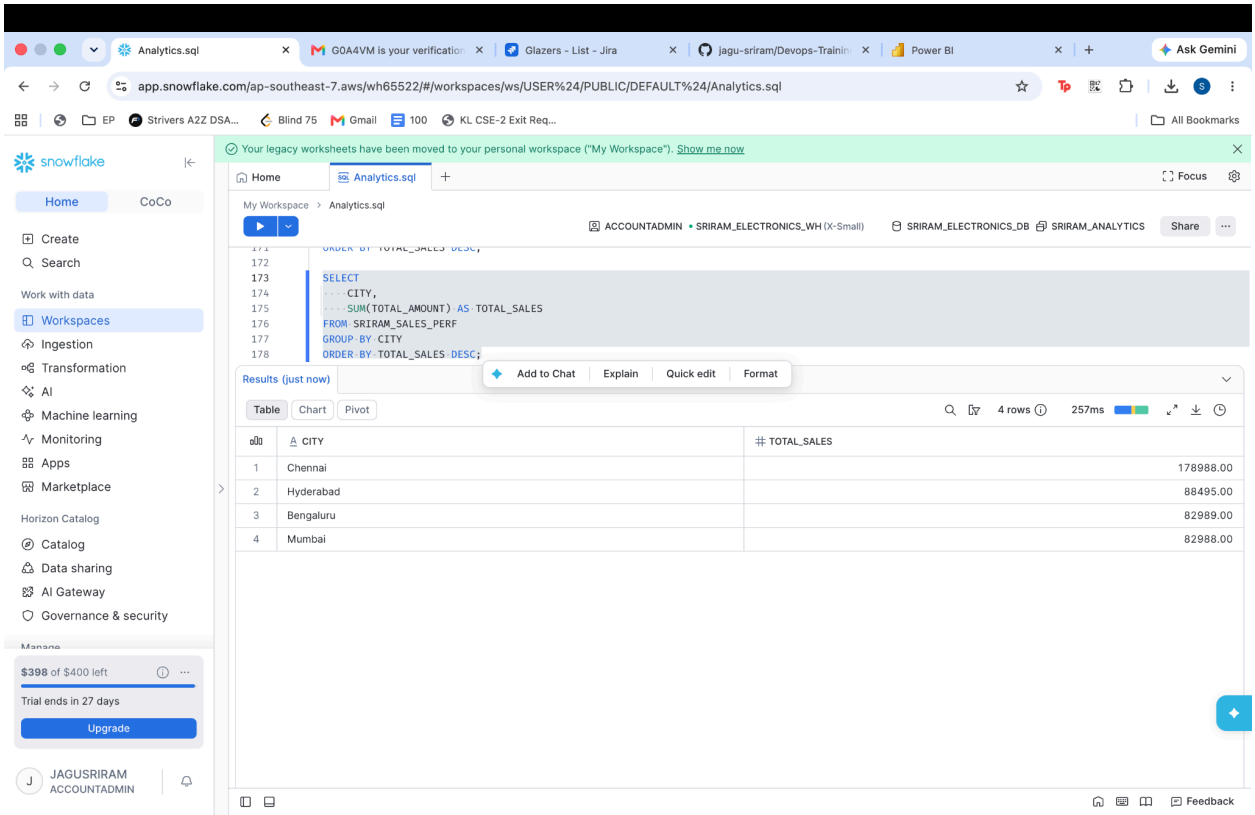

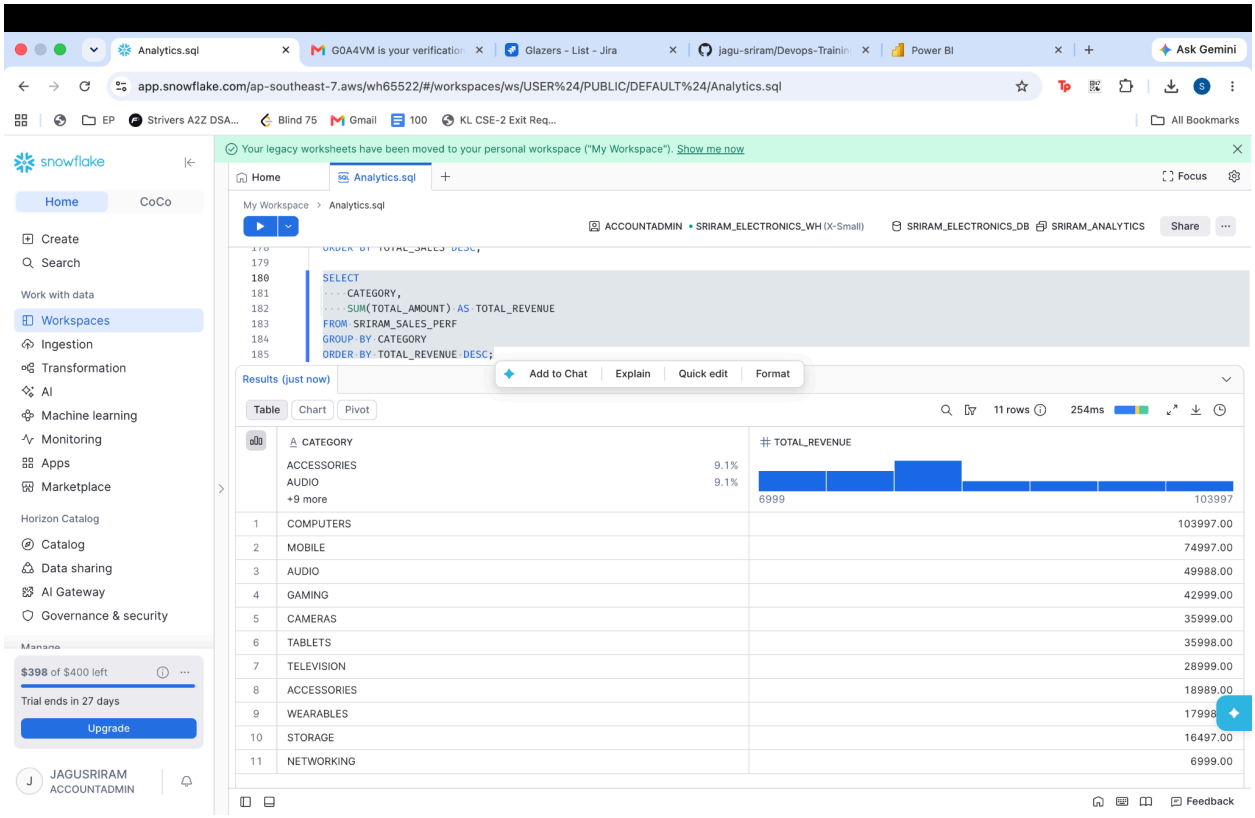

20. Analytical query results: (Product and total sales)

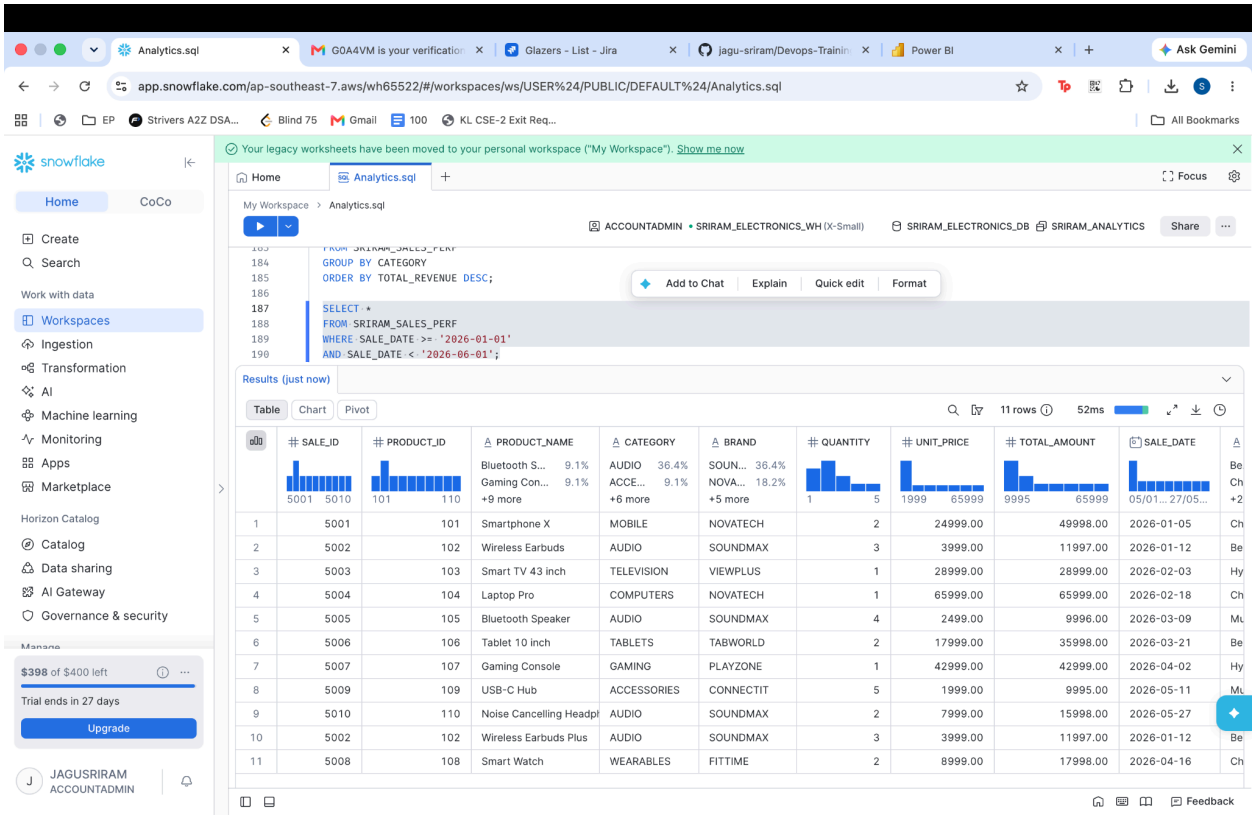

Total city sales:

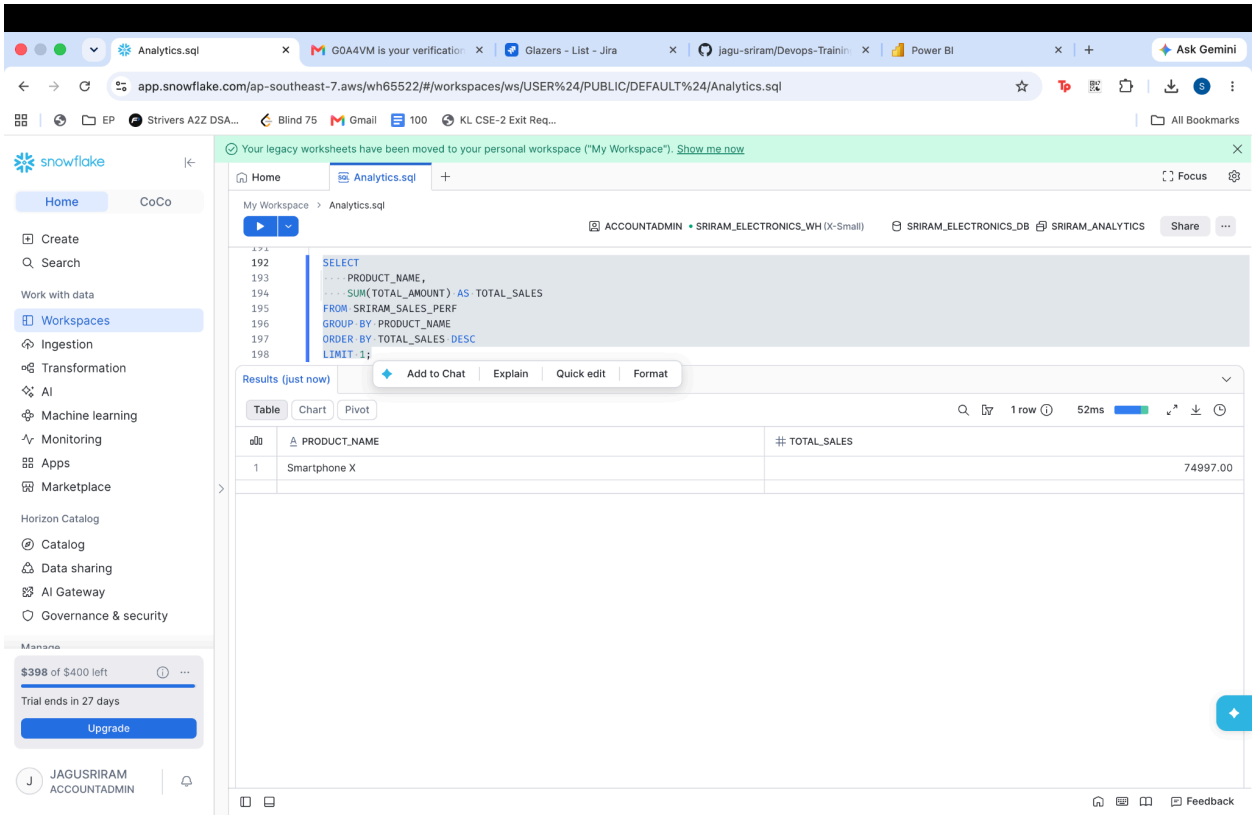

Sales by category:

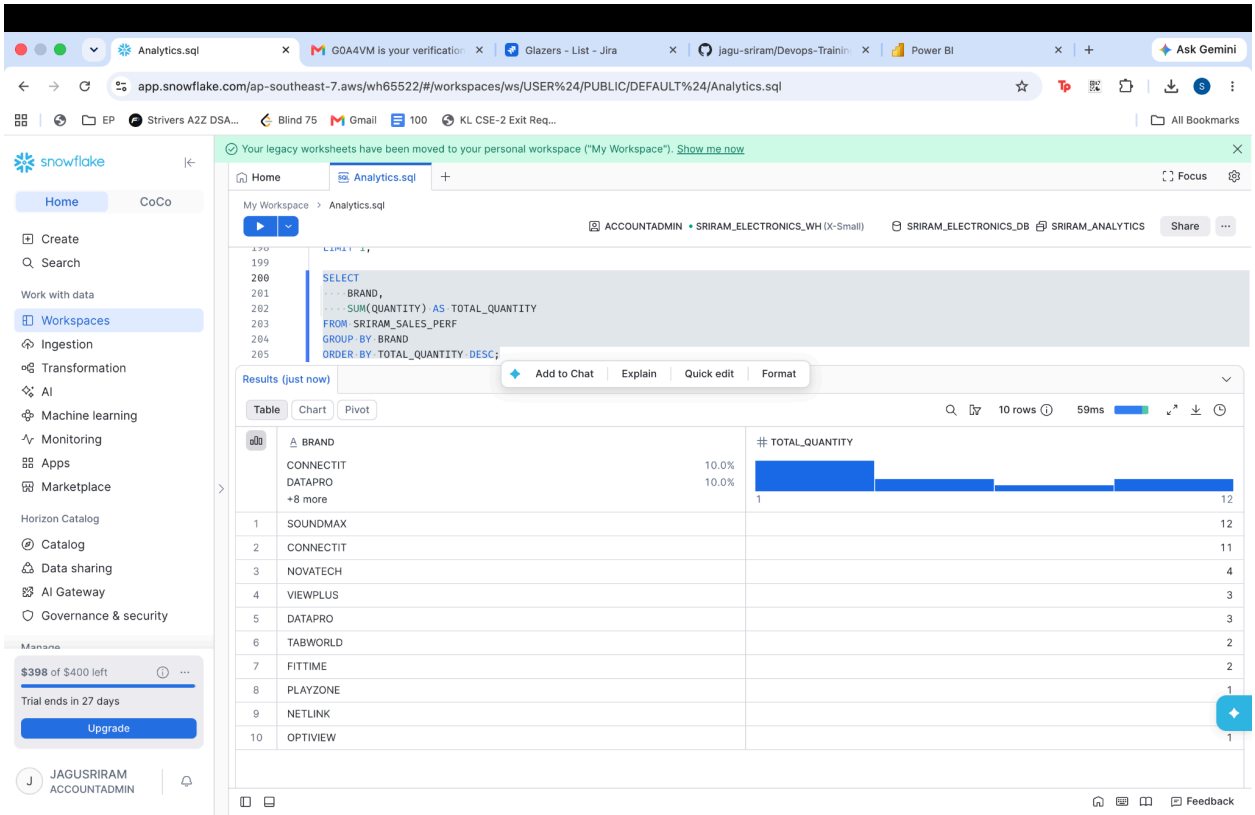

Sales b/w particular dates:

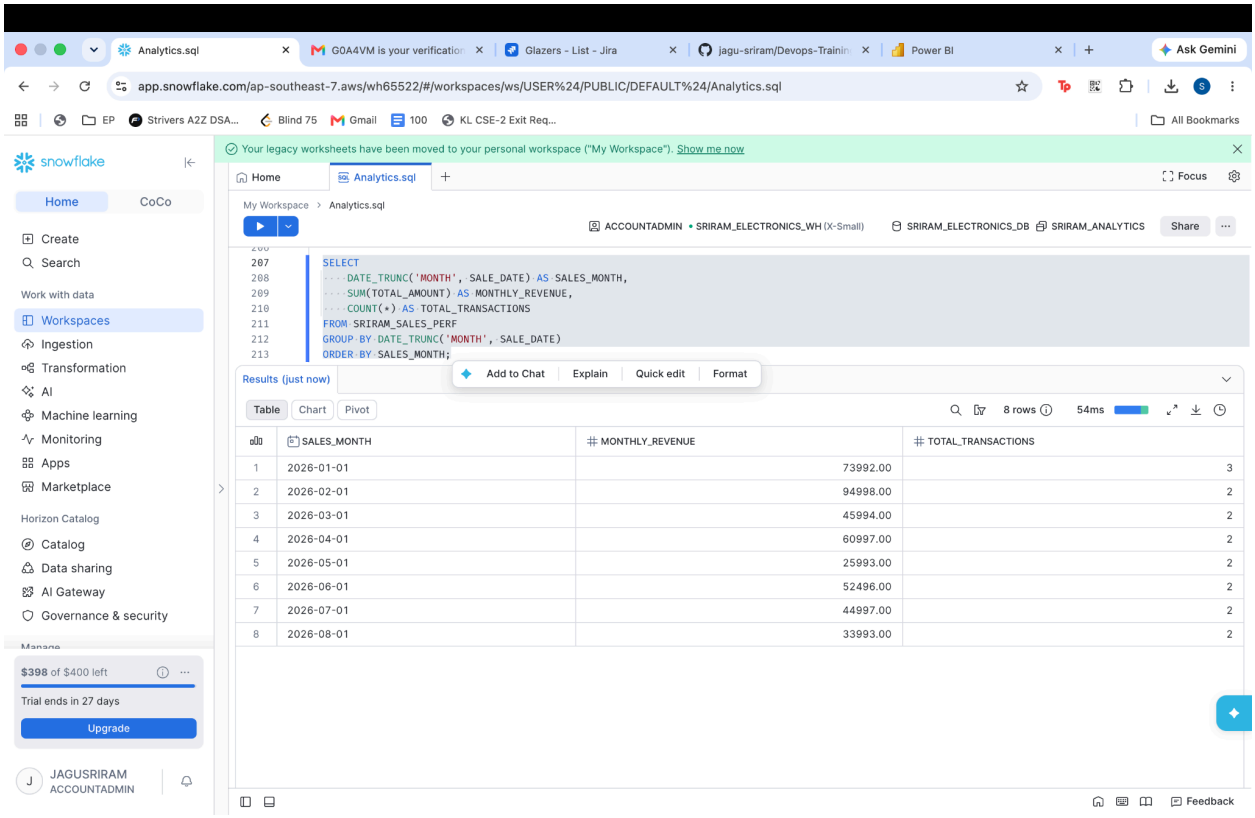

Highest sold product:

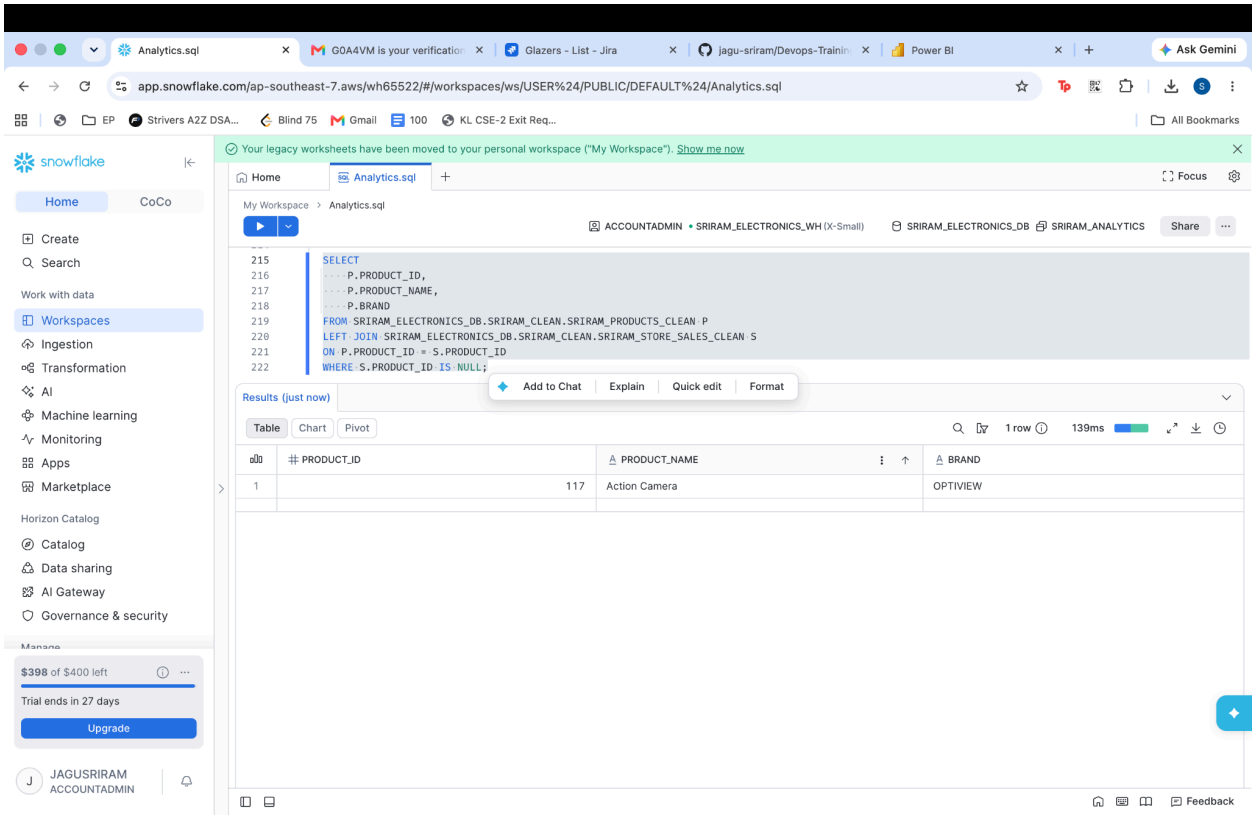

Total quantity sold by brand

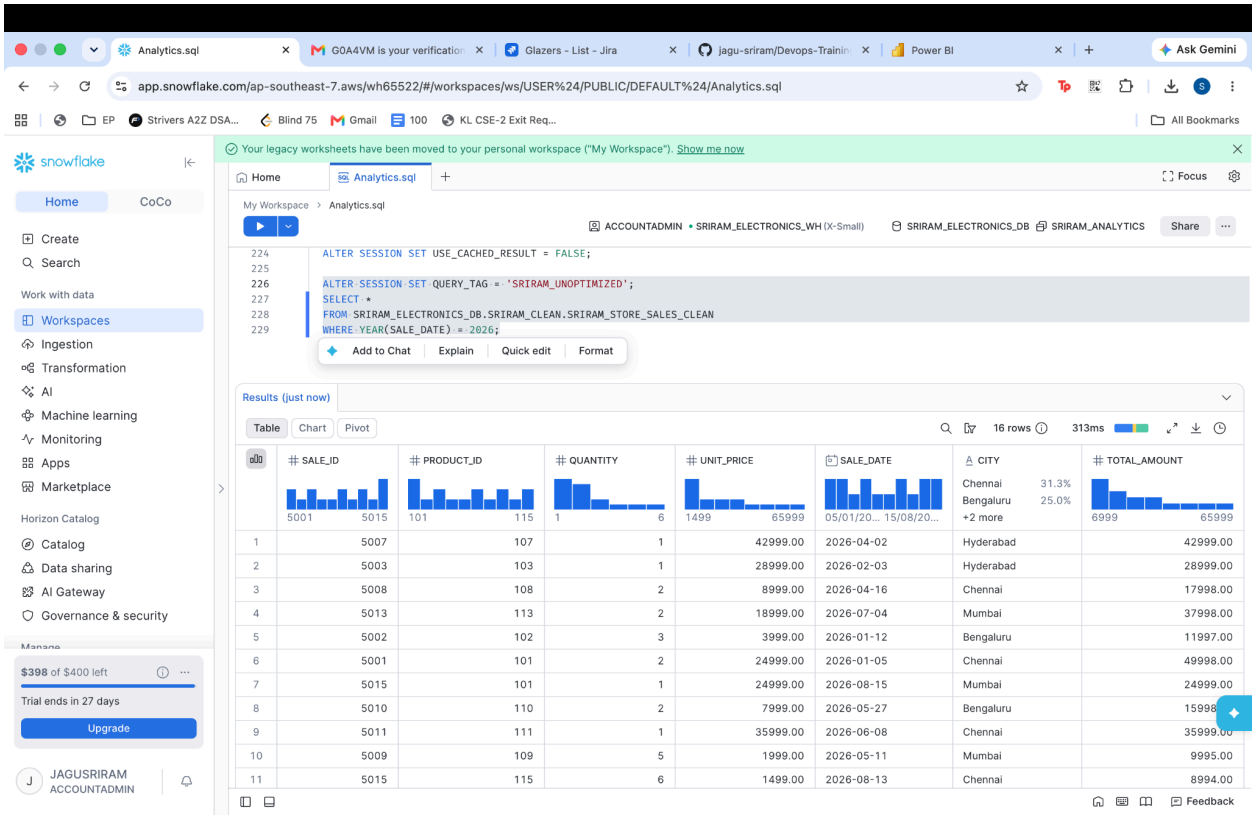

Monthly sales analysis:

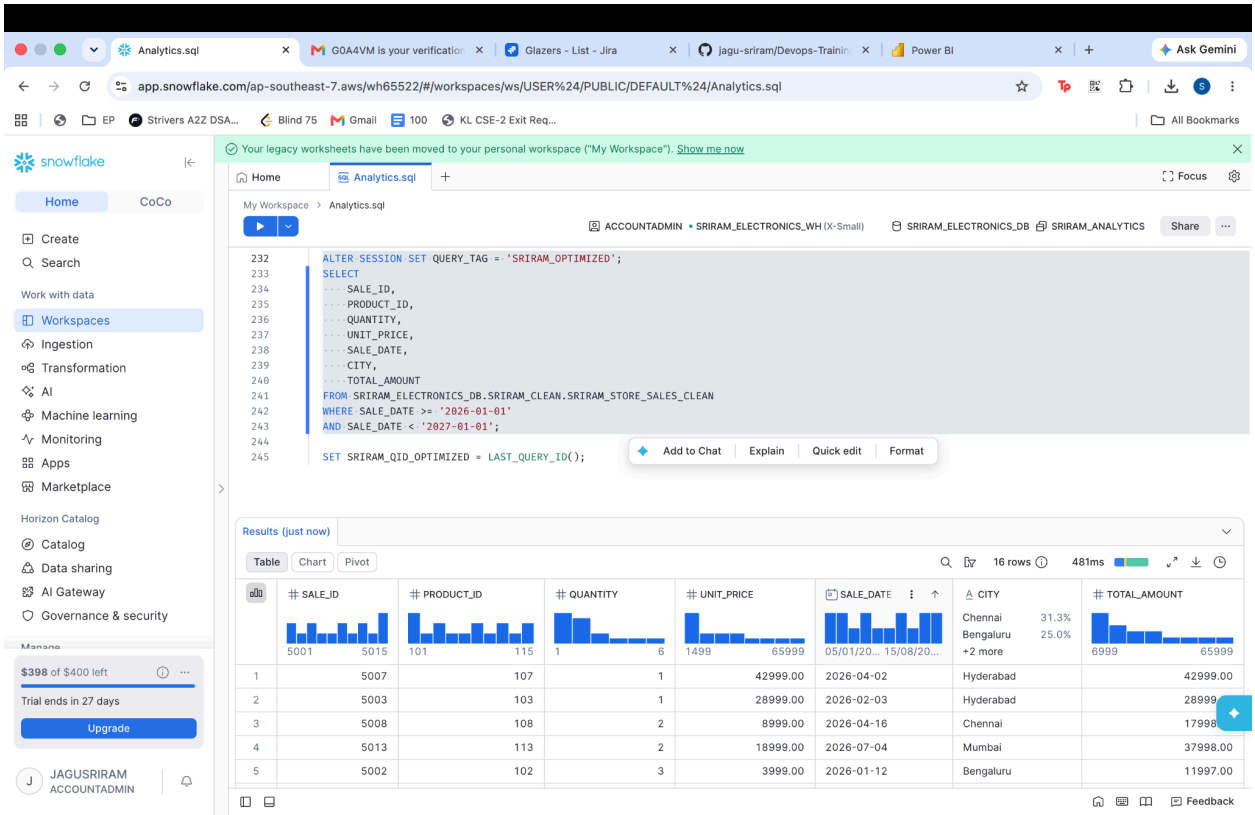

Products without any sales:

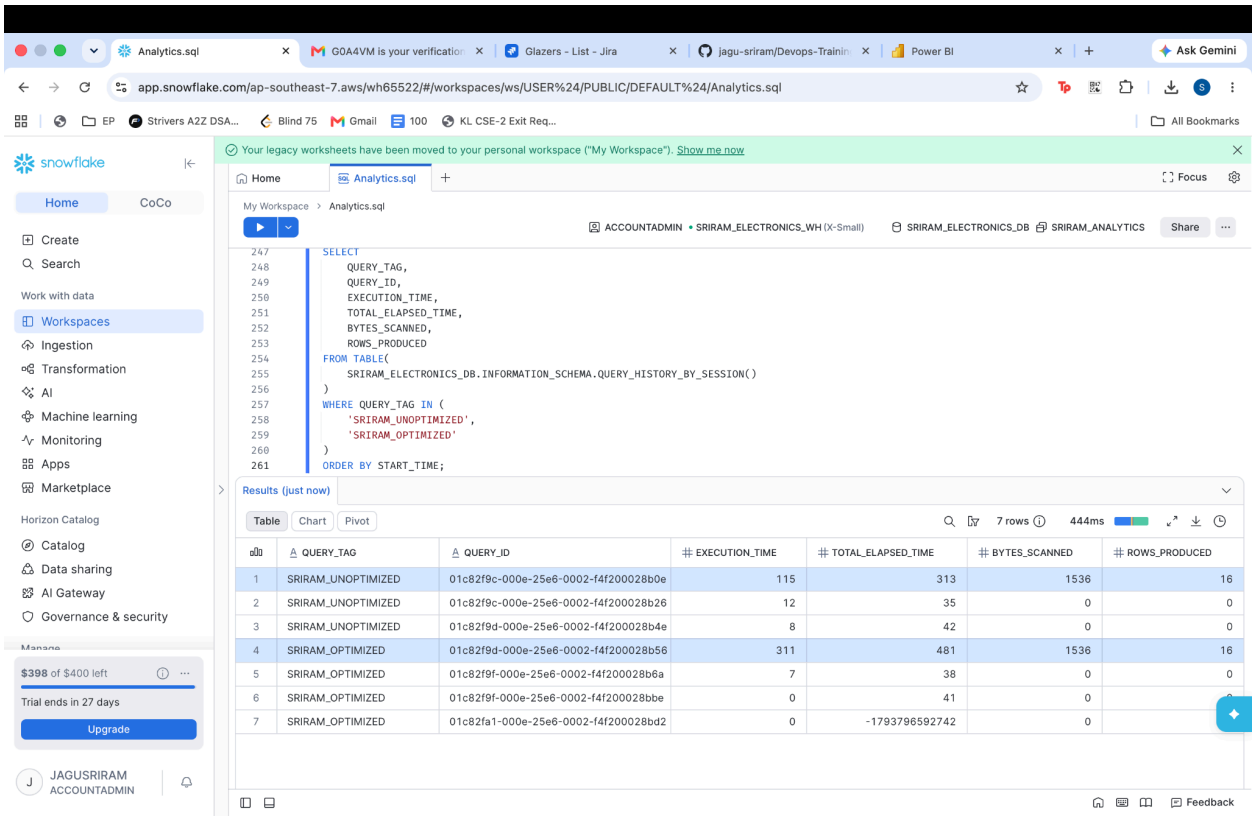

21. SQL Optimization: 1. Running an unoptimised query:

Running an optimized query:

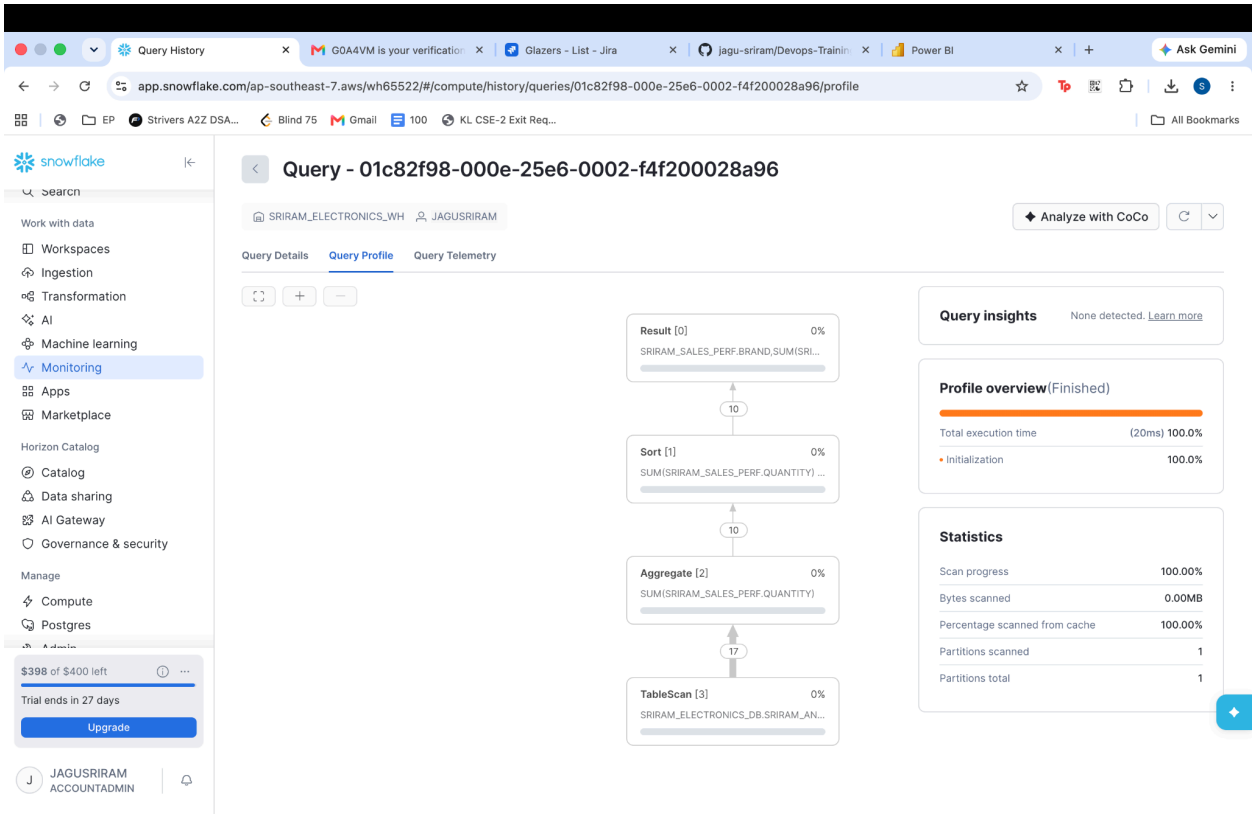

Comparing SQL queries performance:
It is visible for same no of records fetched how the execution_time is differed.

22. Query profile for an example query:

```
SELECT
   BRAND,
   SUM(QUANTITY) AS TOTAL_QUANTITY
FROM SRIRAM_SALES_PERF
GROUP BY BRAND
ORDER BY TOTAL_QUANTITY DESC;
```
