1	`history`	Lists the commands you've run previously	`history` (run a past one with `!42`, where 42 is its number)
2	`clear`	Clears the terminal screen	`clear` (or press Ctrl+L)
3	`date`	Shows the current date and time	`date` or `date +"%Y-%m-%d"` for a custom format
4	`uname`	Shows system information such as the kernel and architecture	`uname -a`
5	`free`	Shows used and available memory (RAM)	`free -h`
6	`uptime`	Shows how long the system has been running and the load average	`uptime`
7	`ln`	Creates links (shortcuts) to files	`ln -s /path/to/file shortcut` (`-s` makes a symbolic link)
8	`sort`	Sorts the lines of a file or of piped output	`sort names.txt` (add `-r` to reverse, `-n` for numbers)
9	`curl`	Fetches data from a URL, useful for testing websites and APIs	`curl https://example.com`
10	`systemctl`	Starts, stops, and checks services on systems using systemd	`systemctl status ssh` or `sudo systemctl restart ssh`
